## PREFACE

The period of three years, 1916, 1917 and 1918, of which this volume marks the close, has been a significant one for agriculture and agriculturists. The great war has perhaps stimulated wider interest in agrarian matters than in any other subject.

The references included in this cumulation form a permanent record of the articles in a selected list of seventy-eight periodicals, including farm papers and technical journals, the publications of agricultural experiment stations, state and federal departments and boards, the reports of agricultural and horticultural associations, and the extension bulletins of colleges and universities.

The Agricultural Index was started in January, 1916, at the earnest request of agricultural college librarians. The plan, as at first proposed, was that of a periodical index, with the addition of the experiment station publications and the United States Department of Agriculture bulletins. It was soon apparent, however, that the plan would have to be broadened to serve other needs than those of the agricultural libraries.

Business and technical libraries, college, county, and government libraries, banks, schools, county agents, editors appear on the list of cooperators or subscribers. The Index also goes to fourteen foreign countries, including China and Russia.

Because of the increased interest in the subject, the literature published has been voluminous. The publications of the United States Food Administration on food preparation and conservation, the statistics published by the Food Administration and the United States Bureau of Labor and Statistics in the Monthly Review on food supply and food control in the United States and other countries, the Commerce reports, the publications issued by banks and railroads, by fertilizer and farm machinery industries, these and many other agencies have been contributing much literature of value to those interested in agriculture in its many phases.

It has been the aim of the Index to assemble references to the most important of this material. Much of it is elusive, and cannot be found in other indexes. Some of it is scattered in many different places. To gather it together seemed to be the natural function of a special index. In pursuit of this literature, other indexes, the Readers' Guide to Periodical Literature, and the Supplement, the Industrial Arts Index, the Public Affairs Information Service bulletin, general bibliographies, Library of Congress cards are carefully checked.

A checklist has been given in each number of the Index to enable the user to secure this material. Since much of it is sent gratis, it is of special value, particularly to the smaller libraries. In this cumulation a checklist is given of the material entered during 1918.

## PREFACE

The magazines have been indexed completely, in most cases, for the three years. In the case of those added since 1916, the indexing has been carried back to cover the period. In some instances the indexing has been carried back to the beginning of the magazine, as in the case of the *Journal of Agricultural Research* and the *American Journal of Botany*. The United States Department of Agriculture Department bulletins are also indexed from the beginning of the series.

The *Journal of Dairy Science*, *Soil Science*, the *Journal of Bacteriology*, *System on the Farm*, the United States Food Surveys, and the United States Seed Reporters have all been started since 1916. The index to these journals is, therefore, complete.

A third questionnaire asking for a vote on a selected list of magazines to be added to the list will be sent out early in the year. Periodicals will be added to meet the need as it is expressed in the replies to this questionnaire.

It is with pleasure that acknowledgement is made of the valuable assistance of the Massachusetts agricultural college library, Mr. Charles R. Green, librarian, in the work of indexing a few magazines not obtainable by the Index. This service has made it possible to complete the indexing of several volumes which would otherwise have been difficult of accomplishment.

The work of the members of the staff has been particularly efficient and painstaking. Grateful acknowledgement is made to Inez Cavert, Florence Arnold, Angelina Vasti, and Agnes Flanagan for their aid in the endeavor to make this volume an accurate record. Many helpful suggestions have been received from subscribers and friends of the Index. Criticisms have been made in a kindly spirit of cooperation. The new year is welcomed as a year of extraordinary opportunity in all countries for all workers interested in agriculture.

# List of Periodicals and Bulletins Indexed

The periodicals and bulletins listed below are now indexed regularly in the Agricultural Index. This list will be increased as rapidly as seems advisable, the additions being selected by vote of the subscribing libraries. All subscribers are invited to send us the names of any periodicals they would find useful if indexed.

Society and association proceedings and annual volumes indexed will not be entered in this list. The full entry giving data as to secretary, address, price, etc., will be found in the main alphabet under the name of the society.

\* One cooperator made the suggestion that it would save time for the librarian if the data regarding the publication of the title page and index were shown in this list. This information will be found below. Abbreviations are given at bottom of page.

It has been suggested that it would be a convenience to the librarian to know which experiment bulletins have been indexed. The inclusive bulletin and circular numbers of material indexed in this volume have been given in the list below. The inclusive volume numbers of the magazines indexed are also given.

\* **Explanation:** Subject headings are in boldface type. The magazine entry proper is formed of items in the following order: The title of the article; the author; the illustrations, plans, maps, etc.; the name of the magazine, abbreviated (the "List of Periodicals indexed" following the editorial page gives full name of magazine); the volume number and the paging, separated by a colon; the date. For example, an entry under Aberdeen Angus cattle, "Two Aberdeen-Angus shrines. W. C. McGavock. *il Breeder's Gaz* 71:771 Ap 12 '17" indicates that the illustrated article entitled "Two Aberdeen-Angus shrines" in *Breeder's Gazette*, Vol. 71, on page 771 of the issue for April 12, 1917, is on the subject of the Aberdeen-Angus breed of cattle.

Entries for occasional material are usually self-explanatory, and are marked with an asterisk when they first appear only. A checklist of the occasional pamphlet literature entered in the current issue will be found immediately preceding the main alphabet.

# Uruguay

President of Uruguay has recommended to the General assembly that foreign scholarships be granted each year to fourteen students of agricultural and veterinary colleges. These scholarships would be competitive based on a year's work at a Uruguayan college. The proposed law specifies that some of the scholarships shall carry provision for special work in the United States, and others for training in Australia, France, Germany, and Argentina. Agricultural research in the Virgin Islands is provided for in the appropriations for the U. S. Department of agriculture, for the current fiscal year. The Danish authorities established an agricultural experiment station near Christiansted, St Croix, in 1910, which ultimately included a tract of 225 acres. This station is to be taken over by the States relations service of the Department of agriculture and the staff will be increased. Besides continuing experiments on sugar cane, cotton, vegetables, etc., the department is likely to investigate the live stock possibilities of the islands. Dairying is now almost unknown there. The leading crops are sugar cane and Sea Island cotton. An agricultural survey of the islands has been made by D. W. May, agronomist in charge of the Porto Rico experimental station.—Sci Am

- \* Measures are being taken by the newly appointed Dutch Minister of Agriculture, industry, and commerce to increase the supply of edible oils in the Netherlands by making full use of the domestic beechnut crop. Between 2,000 and 2,500 metric tons of these nuts may be collected by school children if every effort is made, and from this amount of raw nuts 300,000 to 400,000 kilos of oil may be obtained. The *Zuipen Gazette* reports that a price of 25 florins per 100 kilos (about 5½ cents per pound at the present rate of exchange) will be paid to the gatherers. Owners of private lands from which beechnuts are gathered will receive compensation at the rate of five per cent of the sums paid to the gatherers, and they will also have the right to purchase cattle cake, prepared from the pulp of the nuts from their property, at 50 florins per 100 kilos.—*Sci Am Sup*

cessful. Nearly 50,000 meals have been served the past eight months in two kitchens maintained in West Ham, near London. The average charge has been 10 cents per meal to consumers, although nourishing meals are sold for as little as 2 cents. A communal kitchen with capacity for 1,000 meals daily, opened recently in North Woodwich Road, represented an investment of only \$1,500 and gives great economies in fuel and labor, as well as furnishing properly cooked foods with full nutritive value and the avoidance of waste

How to supply raw cotton to Japanese cotton spinners, whose position in Japan's industrial system is extremely important, is now one of the most serious questions which confronts Japan. Mr Ito, head of the Agricultural affairs section, Chosen government, said that the success of Chosen in the growing of upland cotton had been very striking. The cotton acreage this year is 70,000 chobu, an increase of 63,500 chobu over 1912. All this has been brought about by the careful supervision and encouragement of the Government-General.—*Business Digest* \$5 per yr.
